Is the preprocessing and feature creation well described and suitable?

Are the models and methods described accurately?

Is the argumentation for the models used in the case solid?

Is the described model selection adequate?

Is the described model validation adequate?

Is the argumentation/choice/motivation for the model selection and validation adequate?

Are the categorical features handled correctly?

Is the description of handling missing data solid and the procedure adequate?

Is the estimation of the expected accuracy well described and the chosen method appropriate?

And an overall assessment ☺
